

STOCKTON UNIVERSITY

PROCEDURE

Bloodborne Pathogens

Procedure Administrator: Vice President for Facilities and Operations
Authority: The Occupational and Safety Hazard Act of 1970; The 1984 New Jersey Occupational Safety and Health Act.
Effective Date: September 23, 2009; October 14, 2010; January 31, 2012; June 3, 2021
Index Cross-References:
Procedure File Number: 6905
Approved By: Dr. Harvey Kesselman, President

In recognition of bloodborne pathogen hazards, the New Jersey Public Employees Occupational Safety and Health Act (PEOSH) has adopted the Occupational Safety and Health Administration (OSHA) regulation Bloodborne Pathogens Standard, 29 CFR 1910.1030 (Standard), to help protect New Jersey public workers from these health hazards.

Stockton University is committed to providing a safe and healthy work environment. An Exposure Control Plan (ECP) eliminates or minimizes occupational exposure to bloodborne pathogens in accordance with the PEOSH Standard.

The ECP is a key document to assist the University in implementing and ensuring compliance with the Standard, thereby protecting University employees. The ECP can be found on Stockton University's Department of Environmental/Health/Safety website.
